

# NATURE PLAY RECIPE CARD

## Make a Cubby House

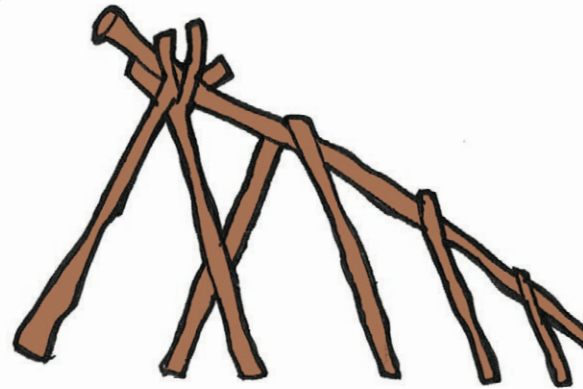

### INGREDIENTS:

- Three Y-sticks
- Smaller sticks
- Optional: leaves, grasses, anything lying on the ground.

### METHOD:

- Lock your two Y-sticks together.
- Interlock the third longer stick (the spine) into the two Y-sticks to make a frame.
- Check that the frame is safe and will not fall down.
- Enclose the frame with other sticks leaning from the spine to the ground making sure you leave an opening to get into your cubby.
- Optional: weave in or put odd natural materials to enclose the sides like grasses, leaves, pinecones.
- Play in & around the cubby. This is the best part!

### SAFETY AND CARE:

- Check that your frame is sturdy so it does not collapse.
- Once you have made the cubby take some time to enjoy what you have built.
- If you have built your cubby in a public place always deconstruct your cubby before you leave.
- Always get your cubby materials from the ground, never from a living plant.

### Did you know?

You can build a cubby inside as well as out. Use blankets and stuff you can find around the house.
